Subject: GBF/HARC comments on Corps August 2015 evaluation of SJRWP FS remedial alternatives
Importance: High

Dear Gary-

Please see attached a GBF/HARC comment letter on the Corps August 2015 evaluation of SJRWP FS remedial alternatives. HARC is our technical advisor for the TAG grant.

We hope you find these comments useful in EPA's decision-making on a proposed cleanup plan for the site. These comments reflect on the both the Corps study and the responsible parties' underlying draft interim feasibility study.

We have a very high degree of concern about the future environmental health of the bay and the human health of its users should the responsible parties be allowed to simply beef up the temporary armored cap. While we have some issues with the Corps study itself, as evidenced in the letter, we do feel that their study certainly reveals of high degree of uncertainty of cap success. Five hundred years, or even more, is a long time to count on such an alternative to contain these extremely toxic wastes in such a dynamic, busy tidal riverine-estuarine environment in a hurricane-prone area.

Thank you in advance for considering these comments.

We appreciate all the hard work your team has put into the site and we hope for an acceptable solution.

9672237

Sincerely-
Scott
